ECZEMA: UNDER CONTROL. SO ROLL UP THOSE SLEEVES.

A key to clearer skin may be within.
For ages 6 years and up.

INDICATION
DUPIXENT is a prescription medicine used to treat people aged 6 years and older with moderate-to-severe atopic dermatitis (eczema) that is not well controlled with prescription therapies used on the skin (topical), or who cannot use topical therapies. DUPIXENT can be used with or without topical corticosteroids. It is not known if DUPIXENT is safe and effective in children with atopic dermatitis under 6 years of age.

Please see Important Safety Information throughout and click for the full Prescribing Information including Patient Information.
REady to show more skin?

With Dupixent, you can.

When topical prescriptions and steroids aren’t enough, and your symptoms or flare-ups keep coming back, it’s time for another kind of treatment. Dupixent proactively treats moderate-to-severe eczema (atopic dermatitis) by targeting a root cause of it. That means clearer skin and itch relief you can count on. So get ready to get ahead with Dupixent and roll up those sleeves.

IMPORTANT SAFETY INFORMATION: Do not use if you are allergic to dupilumab or to any of the ingredients in Dupixent.

Please see Important Safety Information throughout and click for the full Prescribing Information including Patient Information.

Ready to show more skin?
KNOW WHAT TO LOOK FOR.

If eczema is not well controlled with topical prescription medications, or if they can’t be used, it may be time to rethink your eczema control. Talk to an eczema specialist if you or your child:

► HIDE SKIN FROM OTHERS
► HAVE ECZEMA THAT KEEPS COMING BACK
► TAKE ORAL STEROIDS MORE THAN ONCE A YEAR
► TAKE IMMUNOSUPPRESSANTS MORE THAN ONCE A YEAR

IMPORTANT SAFETY INFORMATION: Before using DUPIXENT, tell your healthcare provider about all your medical conditions, including if you have:

- eye problems
- a parasitic (helminth) infection
- are scheduled to receive any vaccinations.

You should not receive a "live vaccine" if you are treated with DUPIXENT.

Please see Important Safety Information throughout and click for the full Prescribing Information including Patient Information.
THE STORY’S
GETTING CLEARER.

The latest research has revealed that people with moderate-to-severe eczema have an overly active immune system that produces more inflammation under the skin than normal. This is what can lead, in part, to the rashes and itching commonly seen and felt on the surface of the skin. If you, or your child, have symptoms that keep coming back, it may be time to ask your eczema specialist about DUXIPENT.

IMPORTANT SAFETY INFORMATION: Before using DUXIPENT, tell your healthcare provider about all your medical conditions, including: If you (cont’d): are pregnant or plan to become pregnant. It is not known whether DUXIPENT will harm your unborn baby. There is a pregnancy exposure registry for women who take DUXIPENT during pregnancy to collect information about the health of you and your baby. Your healthcare provider can enroll you or you may enroll yourself. To get more information about the registry call 1-877-311-8972 or go to https://mothertobaby.org/ongoing-study/dupi.

PROACTIVELY TREATS ECZEMA.

DUPIXENT® is a revolutionary treatment and the first biologic to treat moderate-to-severe eczema (atopic dermatitis). Unlike topical steroids, DUPIXENT works by targeting a key source of inflammation deep beneath the skin to prevent flare-ups on the surface. That means, even when your skin looks clear, DUPIXENT is constantly working, under the surface of your skin, to help fight your eczema.

WHAT IS A BIOLOGIC? A BIOLOGIC IS AN INJECTABLE PROTEIN MADE FROM LIVING CELLS THAT HELPS YOUR BODY FIGHT DISEASES.

IMPORTANT SAFETY INFORMATION: Do not use if you are allergic to dupilumab or to any of the ingredients in DUPIXENT. Please see Important Safety Information throughout and click for the full Prescribing Information including Patient Information.

A BREAKTHROUGH ECZEMA TREATMENT.

By targeting a key source of inflammation, DUPIXENT can help make a difference that can be seen and felt.

*Please see adult, teen, and children (6-11) clinical data on pages 14, 16 & 18.

IMPORTANT SAFETY INFORMATION: Especially tell your healthcare provider if you are taking oral, topical, or inhaled corticosteroid medicines or if you have atopic dermatitis and asthma and use an asthma medicine. Do not change or stop your corticosteroid medicine or other oral, topical or inhaled corticosteroid medicines or if you have atopic dermatitis and asthma until you have been shown the right way by your healthcare provider.

DUPIXENT is a prescription medicine used to treat people aged 6 years and older with moderate-to-severe eczema.

For ages 6 years and up.

THE BENEFITS

► CLEARER SKIN
► ITCH RELIEF
► PROACTIVELY TREATS ECZEMA

IMP 10
ORTANT SAFETY INFORMATION: Especially tell your healthcare provider if you are taking oral, topical or inhaled corticosteroid medicines or if you have atopic dermatitis and asthma and use an asthma medicine. Do not change or stop your corticosteroid medicine or other asthma medicine without talking to your healthcare provider. This may cause other symptoms that were controlled by the corticosteroid medicine or other asthma medicine to come back.

SHAWN, REAL PATIENT.

†Individual results may vary.
A FIRST-OF-ITS-KIND TREATMENT FOR CHILDREN.

Caring for any child with eczema can be a struggle—especially when you're constantly trying to avoid triggers. And although your child may outgrow their eczema, approximately one in five never do.

That’s because eczema is a result of a weakened skin barrier and underlying inflammation in the body that cause what they see and feel on the surface of the skin. When prescription topical creams and steroids aren’t helping enough, another kind of treatment might be needed. For 6-11-year-olds, DUPIXENT may provide clearer skin and less itch. It may also help them get ahead of their symptoms.

IMPORTANT SAFETY INFORMATION: DUPIXENT can cause serious side effects, including: Allergic reactions (hypersensitivity), including a severe reaction known as anaphylaxis. Stop using DUPIXENT and tell your healthcare provider or get emergency help right away if you get any of the following symptoms: breathing problems, fever, general ill feeling, swollen lymph nodes, swelling of the face, mouth and tongue, hives, itching, fainting, dizziness, feeling lightheaded or with a severe reaction known as anaphylaxis.
